

## Case Study

Ground Source Heat Pump for a private property in Wimbledon

### At a glance

- **New build house**
- **12Kw heat pump**
- **3 x 90 metre boreholes**
- **Experienced contractor**
- **7 year warranty**

### Objective

As part of their new construction project our client wanted to be more sustainable and approached Nicholls for advice and support for their GSHP system.

### About the project

Our client wanted to demolish their existing home and construct a new, modern house using up to date technology and sustainable systems. Having installed many projects in the surrounding area, Nicholls were able to really understand the geology below the site.

The Nicholls team designed, supplied and installed all aspects of the GSHP system, which now benefits from a 7 year warranty.

The client also benefitted from the BUS grant which is a one off support payment for new GSHP installations.

*"I am delighted with the GSHP installed in our new build house. Nicholls provided first rate advice on the project and have done a fantastic job on the installation. They have been attentive, responsive and provided excellent customer service throughout the project and also, importantly post completion. The staff at Nicholls have been a pleasure to work with".*
