

Case Study

Water Borehole

Royal Ashdown Forest Golf Club

East Sussex

At a glance

- **45m water borehole for golf course irrigation**
- **Long term cost savings**
- **Experienced contractor**
- **Sustainability**
- **No chemicals or additives in the ground water, thereby benefitting the greens**
- **Ongoing service contract with Nicholls Service and Maintenance**

Objective

To install a sustainable water borehole system to help with the client's irrigation needs and reduce their demand on mains water supply.

About the project

Having worked with the management team at another golf course a few years ago, we were asked to investigate the possibility of installing a water borehole system at this site. After undertaking the relevant geological survey we were able to put forward an agreeable proposal.

The club can look forward to many years of cost savings.

"Client Quote"

Throughout the process Nicholls were easy to deal with and incredibly professional in both the consultation and installation phases. The Nicholls' lead contact, Dan Harrison, managed our installation from start to finish, all the time offering suitable solutions as the project progressed. Nicholls' experience and expertise was obvious and we felt in safe hands from day one.

This is the second borehole Nicholls has installed and both projects were equally well managed. I have no hesitation in recommending them for any type of borehole project.
